Template 2: Data Preparation

- **Data Quality & Validation Summary:**
  - **Missing Value Check:** Inspected all 30 rows × 12 columns (360 data cells); `0` null values detected.
  - **Geographic Role Assignment:** Assigned `Manufacturing_Country` to Tableau's `Country/Region` role for automated latitude/longitude geocoding.
  - **Measure Aggregation Standardization:**
    1. Set `Annual_Sales` to `SUM([Annual_Sales])`.
    2. Set `Driving_Range_km`, `Battery_Capacity_kWh`, `Charging_Speed_kW`, `Price_USD`, and `Customer_Rating` default aggregations to `AVG()` so multi-model categories are compared accurately.
  - **Calculated Fields Created:**
    1. **Market Share %:** `SUM([Annual_Sales]) / TOTAL(SUM([Annual_Sales]))`
    2. **Range Efficiency (km per kWh):** `AVG([Driving_Range_km]) / AVG([Battery_Capacity_kWh])`
